Learn how to find and manage technical debt in your code, use code quality tools, and plan effective code reviews.
Learning objectives
By the end of this module, you will be able to:
Find and manage technical debt in your code.
Use code quality tools to improve your software.
Plan effective code reviews for your team.
Understand complexity and quality metrics.

GitHub
Learn how to work with large code repositories, clean up repository data, and manage releases using GitHub.
Learning objectives
By the end of this module, you'll be able to:
Work with large Git repositories.
Use VFS for Git to improve performance.
Use Git Large File Storage (LFS) for big files.
Clean up repository data.
Manage and automate release notes with GitHub.

Learn how to use Git hooks to automatically check your code and improve your development process.
Learning objectives
By the end of this module, you can:
Create Git hooks that automatically check code quality for your team
Build hooks that run before and after commits to check your code
Make security hooks that prevent passwords and secrets from being saved
Connect Git hooks with Azure DevOps and build pipelines
Set up Git hooks for your whole team to use

This module covers strategic code review practices, automated policy enforcement, and scalable team collaboration frameworks essential for modern DevOps implementations.
Learning objectives
By the end of this module, you're able to:
Implement enterprise-grade pull request workflows for scalable collaboration
Design strategic code review processes that enhance quality and knowledge transfer
Configure advanced branch policies and automated governance controls
Orchestrate cross-team collaboration patterns using Azure Repos integration capabilities
Establish audit trails and compliance frameworks through pull request governance

GitHub
This module explores Git branching types, concepts, and models for the continuous delivery process. It helps companies defining their branching strategy and organization.
Learning objectives
By the end of this module, you're able to:
Describe Git branching workflows
Implement feature branches
Implement GitHub Flow
Fork a repo

GitHub
This module explores the fundamental concepts organizations need to understand to start their DevOps transformation journey. Students learn to define DevOps as the union of people, process, and products for continuous value delivery. The content covers identifying transformation teams, establishing shared goals and timelines, understanding cycle time optimization, and implementing validated learning approaches. Key topics include Azure DevOps and GitHub platform introductions, source control fundamentals with Git, and practical strategies for organizational change management. The module emphasizes data-informed decision making, shortened cycle times, and continuous improvement practices that form the foundation of successful DevOps adoption.
Learning objectives
By the end of this module, you're able to:
DevOps definition and core principles
Organizational transformation planning
Team structure and agile practices
